## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1, 3 – 6, 8 – 10, 12, 14, 15, 19 - 21 are allowed. **Regarding claim 1**, the prior art does not disclose or suggest the combination of, inter alia wherein a method for converting an alternating current (AC) input to a direct current (DC) output, the DC output providing power to a load, the method comprising: receiving the alternative current (AC) input; receiving a first feedback signal indicative of a target voltage required by the load, wherein the first feedback signal is an external feedback; receiving a second feedback signal indicative of the DC output, wherein the second feedback signal is an internal feedback; providing a controller module included in an AC-DC adapter and operable to receive the first feedback signal and the second feedback signal; providing a converter in the AC-DC adapter; the controller module adjusting a control signal, responsive to receiving the first and second feedback signals, to the converter to maintain the DC output within a predefined range of the target voltage; and during a charging phase, a difference between the DC output and the target voltage is always positive while providing a charge to the load, and the DC output is reduced to a predefined value upon completion of providing the charge to the load. **Regarding claims 3 – 6, 8 – 10**, claims depend on claim 1. **Regarding claim 12**, the prior art does not disclose or suggest the combination of, inter alia, wherein an integrated alternating current (AC) to direct current (DC) adapter comprising: a rectifier module operable to receive an AC input and generate a first DC output; a buck converter module operable to receive the first DC output and generate a second DC output responsive to a control

signal; an AC-DC adapter; a controller module included in the AC-DC adapter and operable to receive a first feedback signal input indicative of a target voltage required by a load, wherein the first feedback signal is an external feedback, and a second feedback signal input indicative of the second DC output, wherein the second feedback signal is an internal feedback, the controller module adjusting the control signal, responsive to the first and second feedback signal inputs, to the buck converter module to maintain the second DC output to be within a predefined range of the target voltage; and during a charging phase, a difference between the second DC output and the target voltage is always positive while providing a charge to the load, and the second DC output is reduced to a predefined value upon completion of providing the charge to the load. **Regarding claims 14, 15, 19 – 21**, claims depend upon claim 12. allowed.
